### Summary of the amendment

This amendment to the Pediatric and Adult Intercontinental Registry on Chronic Idiopathic Thrombocytopenic Purpura (PARC ITP) registry protocol, Version 2.0, 2005-02-25 foresees the extensions of questions in the various questionnaires (initial, 6 and 12 months, and yearly follow-up). Questions are added to ask therapy of patients and their potentially present co-morbidities. The questionnaires are added to this amendment. The rationale to ask for treatment of ITP is to observe adverse events and complications which may be associated with therapy of ITP.

The Amendment has been approved by the Swiss Ethics Committee in Basel on October 06,2008
